PROFESSIONAL SUMMARY

Senior Software & Data Engineer with 9+ years of experience designing and scaling distributed systems, data-intensive platforms, ETL pipelines, and event-driven architectures across fintech, identity management, and enterprise banking environments. Strong expertise in Python, Java, Kotlin, SQL, Apache Kafka, MongoDB, PostgreSQL, Docker, Kubernetes, and cloud-native microservices.

Experienced in building high-throughput backend systems, real-time streaming platforms, analytical reporting services, and enterprise-grade integrations under regulated financial environments. Proven ability to optimize platform performance, improve data reliability, and support large-scale operational analytics workloads.

Currently completing a Master’s degree in Data Science Management with growing specialization in data engineering, analytics infrastructure, distributed data processing, and scalable data platforms.

CORE SKILLS

Data Engineering & Analytics

- ETL / ELT Pipelines
- Data Modeling
- Distributed Systems
- Real-Time Data Processing
- Apache Kafka
- CQRS & Event-Driven Architecture
- SQL Optimization
- Data Warehousing Concepts
- Streaming Data Architectures
- REST & gRPC APIs

Programming & Frameworks

- Python
- Java (7/8/11/17)
- Kotlin
- Golang
- Spring Boot
- Hibernate
- Node.js

Databases & Storage

- PostgreSQL
- MongoDB
- MSSQL
- Oracle
- Redis
- MySQL

Cloud, DevOps & Infrastructure

- Docker
- Kubernetes
- AWS
- Azure
- Google Cloud Platform
- CI/CD Pipelines
- Prometheus
- Grafana
- Linux / Unix

Collaboration & Engineering

- Agile Methodology
- Technical Leadership
- Cross-functional Collaboration
- Code Reviews
- System Design
- Performance Optimization
- Stakeholder Communication

PROFESSIONAL EXPERIENCE

BanqueMisr (via Andela Network) — Senior Software Engineer

Cairo, Egypt (Remote Contract) | Dec 2022 – May 2025

- Optimized enterprise reporting services using CQRS patterns and MongoDB denormalization strategies to improve reporting performance and scalability for banking operations.
- Migrated Spring Boot services to GraalVM native images, significantly reducing startup times and lowering memory consumption across microservices.
- Enhanced reliability and observability of enterprise services through improved logging, sensitive data masking, and monitoring practices.
- Increased platform quality and stability by expanding automated integration and unit testing coverage using Mockito, WireMock, and related testing frameworks.
- Reduced operational risk and security exposure through continuous OSS vulnerability scanning and dependency upgrades.
- Worked within highly regulated banking environments handling sensitive financial and customer data.

Nomba — Senior Backend Engineer

Lagos, Nigeria | Sept 2022 – Nov 2023

- Designed and developed reusable backend and platform services using gRPC and event-driven microservice architectures.
- Built internal webhook infrastructure supporting REST and SOAP callback processing with scheduled retries using Quartz.
- Implemented application monitoring and operational metrics using Prometheus and Grafana.
- Developed scalable backend systems integrating authentication and authorization services using Auth0 and Cerbos.
- Improved onboarding and identity workflows across multiple products through SSO integration and platform refactoring.
- Participated in architecture reviews, technical debt reduction, and engineering best practice initiatives.
- Integrated Apache Kafka-based communication patterns into distributed services to support scalable asynchronous processing.

Seamfix — Software Architect & Technical Lead

Lagos, Nigeria | Sept 2020 – Jul 2022

Technical Lead

- Led and mentored a team of 8 engineers building enterprise-scale identity and biometric registration systems.
- Improved CI/CD workflows and deployment pipelines, reducing deployment time by approximately 25%.

- Optimized Kubernetes infrastructure and service resource allocation, reducing operational costs by 20%.
- Collaborated with internal and external stakeholders to align technical delivery with business goals and operational requirements.
- Contributed to architectural planning and modernization of distributed services.

Senior Software Engineer

- Migrated caching infrastructure from Memcached to Redis clusters, improving synchronization, scalability, and performance.
- Refactored legacy JEE applications into Spring-based microservices for improved scalability and maintainability.
- Participated in system architecture and integration planning for enterprise microservices and backend services.

3Line Card Management Limited — Lead Backend Engineer

Lagos, Nigeria | Apr 2019 – Aug 2020

- Re-architected core backend systems for the Freedom Network agency banking platform, contributing to major increases in transaction throughput and customer engagement.
- Developed high-scale microservices using Spring Boot and Apache Kafka capable of supporting millions of concurrent users.
- Built distributed backend systems supporting payment and cash disbursement operations.
- Improved platform scalability and resilience using event-driven system design principles.

Longbridge Technologies — Software Engineer

Lagos, Nigeria | Nov 2014 – Apr 2019

- Led backend development for enterprise financial applications integrated with Finacle core banking systems.
- Migrated legacy enterprise systems from JEE/Play Framework to Spring-based architectures for improved scalability and maintainability.
- Built integrations and automation solutions for banking and financial service platforms.
- Worked extensively with enterprise APIs, relational databases, and distributed backend systems.

EDUCATION

Rome Business School

Master’s in Data Science Management | 2024 – 2025

Yaba College of Technology

Higher National Diploma (HND), Computer Engineering | 2015 – 2017

Yaba College of Technology

Ordinary National Diploma (OND), Computer Engineering | 2012 – 2014

TECHNICAL HIGHLIGHTS RELEVANT TO TESLA ROLE

- Strong experience building distributed backend systems and event-driven architectures using Apache Kafka.
- Extensive experience with SQL and NoSQL databases including MongoDB, PostgreSQL, MSSQL, Oracle, and Redis.
- Experience optimizing reporting and analytical systems using CQRS and denormalized data models.
- Strong cloud-native engineering background using Docker, Kubernetes, CI/CD, monitoring, and scalable microservices.
- Experience working in regulated financial environments handling sensitive customer and transactional data.
- Strong communication and collaboration skills across engineering and business teams.
- Hands-on expertise with Python, Java, Kotlin, APIs, distributed services, and production-grade backend systems.

LANGUAGES

- English (Native)
- Yoruba (Native)

NOTES FOR FINAL PDF VERSION

1. Keep the CV to 2 pages maximum.
2. Remove less relevant frontend technologies such as Angular/Vue unless specifically requested.
3. Move Python, SQL, Kafka, ETL, Data Engineering, and Distributed Systems higher in the skills section.
4. Add your LinkedIn profile.
5. If possible, include measurable metrics around throughput, latency reduction, or scale.
6. Use a clean modern layout with strong section spacing and consistent bullet formatting.
7. Tailor your cover letter toward Tesla’s focus on large-scale analytics platforms, operational intelligence, manufacturing data, and high-performance engineering culture.

This version is optimized for the Tesla Senior Data Engineer role emphasizing:

- Data engineering
- Distributed systems
- Kafka and streaming systems
- ETL and reporting platforms

- SQL and scalable backend infrastructure
- Cloud-native engineering
- Regulated enterprise environments
- Cross-functional technical leadership
