Timothy Owolabi S.

Senior Software Engineer — Backend & Platform Systems

Düsseldorf, Germany | (49) 1624079145 | owolabi.sunday08@gmail.com | github.com/sunkylab

SUMMARY

Backend and platform engineer with 9 years building reliable, high-scale systems across financial services, agency banking, and e-commerce. Deep expertise in Java/Kotlin, Spring Boot, and microservice architecture, with a track record of leading migrations, cutting deployment and serving times, and scaling systems to millions of concurrent users. Experienced leading and mentoring engineering teams, and comfortable owning systems end-to-end from architecture through production operations.

EXPERIENCE

Senior Software Engineer — Spreadgroup *Jun 2025 – Present*

- Extended Commercetools' checkout API with its advanced payment flow to integrate PayPal, Google Pay, and Apple Pay express payment methods, reduced checkout drop-off by an estimated 25% while supporting multiple payment rails in a single transaction flow.
- Designed custom API extensions hooking into Commercetools webhooks to enforce business logic and trigger downstream event processing in real time.
- Re-architected the product-to-Coveo batch sync pipeline using streamed CSV processing and a tracking table, cutting sync failures by an estimated 65% and improving data consistency at scale.
- Led the replacement of a legacy Apache Mahout recommendation engine, reducing model load time by an estimated 22% and improving serving performance.

Senior Software Engineer (Andela Network) — BanqueMisr *Dec 2022 – May 2025*

- Migrated base services to GraalVM native image using the Spring buildpack, reducing microservice startup time and memory footprint.
- Refactored core logging libraries by customizing SLF4J to automatically redact sensitive data across services.
- Re-optimized the reporting service internally using CQRS and denormalized MongoDB collections to improve query performance.
- Increased test coverage for retail banking services, writing and reviewing integration and unit tests with Mockito, WireMock, and Castle Mock.

Senior Backend Engineer — Nomba *Sep 2022 – Nov 2023*

- Built core gRPC services and shared libraries (IAM, Storehouse) adopted by other teams, improving reusability and development speed.
- Developed an internal webhooks library for RESTful and SOAP callback delivery, with scheduled retry handling via Quartz.
- Integrated OpenID login via Auth0 and implemented authorization using CerBos.
- Reviewed existing codebases and modules to identify technical debt and code smells.

Software Architect & Technical Lead — Seamfix *Sep 2020 – Jul 2022*

- Technical Lead (9 months): Led and mentored an 8-person engineering team on the Bioregistra product, defining roles, responsibilities, and delivery expectations.
- Redefined CI/CD tooling and process, cutting deployment time by 25%.
- Reduced Kubernetes pod allocation by 20% through service and performance optimization, lowering operational costs.
- Senior Software Engineer (1 year): Migrated the caching layer from Memcache to Redis, enabling synchronized multi-cluster caching.
- Converted key services from JEE to Spring microservices for easier integration with Spring Cloud.

Software Engineer — 3Line Card Management Limited *Apr 2019 – Aug 2020*

- Restructured core and shared services for the Freedom Network agency banking platform, growing customer engagement and revenue up to 10x within 3 months.
- Built the Cash Disbursement Application for NCTO using a Spring and Apache Kafka microservice architecture, supporting more than 3 million concurrent users.

TECHNICAL SKILLS

Core: Java (7/8/11/17), Kotlin, Spring Boot, Microservices, REST/GraphQL APIs, OAuth/SAML, Hibernate
Data & Messaging: PostgreSQL, MySQL, Oracle, MSSQL, MongoDB, Redis, Kafka, RabbitMQ
Infrastructure: AWS, Azure, Google Cloud, Docker, Kubernetes, GitLab CI/CD, Unix
Also familiar with: Python, Golang, PHP, Node.js, React, Vue, Angular, Dropwizard, Digital Ocean, Heroku

EDUCATION

Masters in Data Science Management — Rome Business School (2024 – 2025)
Higher National Diploma in Computer Engineering — Yaba College of Technology, Nigeria (2015 – 2017)
Ordinary National Diploma in Computer Engineering — Yaba College of Technology, Nigeria (2012 – 2014)
